ClimatePartner °

For the sake of the environment: printed without
impacting the environment.

How to do more with less.

One system, numerous possibilities – to streamline your organisation.

Just imagine: you could have all access, billing and locker systems under one roof. A good idea? We have the right solution for you: simple, safe, cashless and tailored to your requirements. From the time your guests check in to when they check out, one chip controls everything. And everything in between: control of turnstiles or barriers, booking a course, online or battery operated locker systems, changing cubicles, showers, solarium or massage area, restaurants, specific access authorisations and electronic time recording for your staff and much more.

This makes it easier to analyse valuable statistics, increase the attractiveness of your products and services as well as efficiency and exploit potential savings. And you move more as a result. This also benefits your turnover, because "cashless payment" has shown to increase sales by up to 40 %. We have over 30 years' experience as Europe's technology leader in the field of electronic management systems offering the highest standards of security and intelligent eco-friendly systems that make the management and organisation of your fitness club much more profitable and easier. This will not only benefit your members and staff, but also you – that's for sure.

Never lose sight of what is going on.
GAT check-in/out terminals from GANTNER.

Who is coming in, who is leaving? And who is currently working out? Does every visitor really have a valid membership? Hardly any fitness club operators or their staff have the answers to these questions at their fingertips. So it is extremely valuable for them to keep an eye on this.

The GAT check-in/check-out terminals give you a quick, easy and secure overview. A chip acts as the entry card. Integrated into a wristband or a card, it stays with the visitor from the moment he or she enters the fitness club to the moment he or she leaves. The terminals are easy to use, with a variety of models which can be built into any type of architecture. Simply hold the wristband or card in front of the reader and the system checks the user's access authorisation against their membership.

The benefits are obvious. You and your members can always be certain that the changing room lockers are only enabled after personal check-in. With or without a turnstile – it is quick and easy to check in and check out. You and your staff have no administrative work and can use the valuable time you gain to offer personal support to members. You can also be certain that only people with a valid membership can use the club services. In addition, the GAT check-in/check-out system gives you valuable data for targeted, optimised marketing.

4 Management software

Contactless door-opening technology? The magic word is networking.

Maximum convenience and security:
the GANTNER online locking system.

Keys, coins and padlocks? Today, these systems are not very secure, inconvenient and outdated. Networking is the magic word in the modern world. The GANTNER online locking system enables you to manage all the locks in your fitness club centrally. With an integrated chip in a wristband, a card, a watch or a keyfob, you can give your members a free choice of locker or allocate them individual lockers personally online.

Every time the locker is opened and closed, the management software detects it so you have information about current capacity utilisation at all times. The integrated alarm security system gives you the maximum possible security and is intuitive for your members to use. If the computer should fail briefly, an emergency mode ensures that the online locking system operates uninterrupted. Your customers will appreciate the convenience of a secure electronic locking system and can concentrate on their sporting passion with complete peace of mind.

On top form? There's even more.
Perfect for retrofitting: the GANTNER patented battery operated locking system.

Do you already have a system with changing room lockers in your fitness club? Do you want to upgrade your electronic system?

Then our patented battery operated locking system is the perfect choice and allows your members to open and close their changing room locker, for example, intuitively and conveniently. As with our online locking system, a chip controls all types of lockers and cloakrooms in your fitness club quickly, easily and securely.

There is no longer any need to issue and manage keys. The batteries used in this system are extra long-life. The locks on the lockers are suitable for any operating mode and any locker type, whether made of wood, metal, plastic or glass.

1 Battery-operated lock for lockers – e.g. glass doors
2 Battery-operated lock for lockers – e.g. plastic doors

More service, more turnover.
Cashless payment with the GAT system.

Most members do not like to leave their sports bags unattended – theft is of great concern. Even the best fitness club is not fully protected against theft. This can ruin the sports experience.

The GAT system allows you to relax because money is securely locked away in the lockers and cashless payment is used for all food and drink in the club. Peace of mind and effortless. Billing takes place easily and securely at the end of the stay or by means of a monthly invoice. The chip is not only a key and the core of a perfect organisation system, it is also an uncomplicated and secure means of payment. It positively influences the spending behaviour of visitors. Studies show that cashless payment can increase spending by up to 40%.

This makes additional services such as restaurants, solarium, massages, vending machine snacks or products in your shop particularly attractive to your members. For you, this means: higher turnover, more security, greater convenience and a quick and complete overview of your takings.

6 Vending

Sophisticated individual solutions.
One card for everything.

1 | Parking
Member cards can also open car park barriers.

2 | Main entrance
Even outside opening hours, employees can enter via the main entrance using the chip card. Every entry is logged.

3 | Check-in/Check-out
Just hold the club card in front of the terminal and you are checked in. Lockers and all other services can be used with the card from this point on.

4 | Turnstile
The alternative to open check-in, depending on the club management's preference. In any case, only people holding a valid membership can work out.

5 | Changing area
The club card is also a key for the lockers, which are enabled when you check in.

6 | Information terminal
Forgotten your locker number? No problem. Simply go to the information terminal – it also shows any cash credit.

7 | Wellness, sauna
Access authorisation to special areas is governed in the membership agreement and shown on the club card, or the latter serves as a means of cashless payment. Either as a debit card or a credit card.

8 | Solarium
Move the club card across the reader and select the required tanning time. The charge is deducted from the available credit and the machine starts automatically.

9 | Bistro, vitamin bar
Work out and relax without cash. This concept extends to healthy refreshment. You use the club card to pay.

10 | Vending machines
Payments for vending machine drinks and snacks can be made without cash with the club card.

11 | Beauty
The atmosphere should be calm and relaxing. That is why access is only permitted to those having treatment.

12 | Internal doors
Offices, stock room, work areas etc. Employees need rapid access to areas where no customers are permitted. This is simple with a GANTNER system.

13 | Showers
Low basic costs, pay for extras. The shower terminal activated with the club card is compatible with the new trend in the fitness industry.

14 | Check-out
An electronic check is performed to see whether a locker is still in use or whether there is an outstanding bill, otherwise "Goodbye! See you next time!"

GAT Info 6100

A small, elegant terminal to display visitor information. Just hold the club card up to the light and the display will show important information such as the locker number, time remaining and cash credit. Your guests will feel they are in good hands!
