Senior Living | *enhancing lives through technology*

Solutions to help build the foundation for competitive advantage and market differentiation.

multiPASS-iD

Senior executives, directors and operations managers are thrilled with the return on investment.

Benefits for today with tomorrow's technology

For over 67 years Floyd Total Security has been protecting people and their assets. We've partnered with SALTO Systems, a global leader in smartcard controlled devices to expand our services within the Health Care market to include Senior Living communities. MultiPASS-iD smart technology builds a foundation starting at the resident door to reduce cost and lower risk across many applications.

Increased Satisfaction

Resident and family satisfaction increases due to the greater sense of security and ease of use. No longer do residents with an unsteady hand have to fight with putting a key into a lock while holding a bag, cane, or a walker. Employee satisfaction increases with the knowledge they are protected from the emotional stress of finger pointing and false claims of wrong doing.

Revenue Generation

In today's competitive market executives like the fact they are able to leverage existing dollars they have invested in marketing and differentiating individual properties. They can show additional dimensions on why they are the best choice and why they are also worth the premium price.

Lowering Operating Costs

Not only are organizations able to leverage existing investments to differentiate their properties, they are able to compete on the operating cost side of the equation by reducing direct labor rates that have an endless escalation built in.

SALTO
inspiredaccess

Needs within senior living communities are expanding and increasing in complexity. Flexible solutions are crucial. Inexpensive traditional mechanical keys and stand alone electronic locks are unable to offer the required level of functionality to meet the changing requirements for resident, staff and back of house operations. Traditional wired access control systems are disruptive to install and cost prohibitive. MultiPASS-iD's smartcard technology offers the opportunity to provide full access control features at an affordable investment.

Credentials

multiPASS-iD leverages a multiple use, high frequency RFID credential available in several form factors that can assist with many applications within an organization. Applications include employee time & attendance, cashless point of sale (POS), secure computer login, service delivery record keeping and many more.

Commitment to Excellence

Our expertise with mechanical locking hardware coupled with today's advanced integrated systems, uniquely position us to tailor the most advanced and creative solutions specifically to your needs. SALTO Systems was established in 2001 with the objective of creating a new advanced state-of-the-art access control concept. At multiPASS-iD we pride ourselves on our ability to implement what is necessary, not what is available for sale.
